DETAILED ACTION

Allowable Subject Matter

1. Claims 1-116 are allowed.
2. The following is an examiner's statement of reasons for allowance: In base method claim 1, a first light component is passed through a first polarization beamsplitter element to produce first and second polarization states of the first light component. The two polarization states are passed through respective spatial light modulators to create a telecentric illumination at each of the spatial light modulators. Each of the spatial light modulators is addressed with a signal to create respective first and second modulated light beams, both of which pass through the polarized beamsplitter element. Identical components are provided for second and third light components. No prior art has been found to disclose or suggest the specific combination of these components, as recited in the claim. Base method claim 40 further specifies the three light components as being red, green and blue. Base apparatus claims 72 and 91 recite similar limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following references were cited in related application Serial No. 09/794,669.
